Execution Drives Genuine Product Value

The Planning Trap

Paper plans create false certainty without delivering validated learning.

Extensive upfront documentation delays customer interaction and feedback.

Theoretical frameworks cannot substitute for tactile product momentum.

The Power of Doing

Humans naturally discover breakthrough solutions through tangible building.

Rapid execution uncovers real constraints faster than team debates.

Working prototypes generate alignment across engineering and stakeholders.

The Core Iteration Loop Powers Delivery

PHASE 01 / INITIATION

Framing the Goal

Brainstorm → Ideate → Plan

Define problem boundaries quickly without over-specifying requirements upfront.

PHASE 02 / THE CORE LOOP

The Rapid Engine

Design ↻ Develop ↻ Release

Continuously prototype and refine features until the model performs reliably.

PHASE 03 / DELIVERY

Shipping to Users

Deplo → Publish → Share

y
Integrate API keys, expose user endpoints, and distribute to live audiences.

AI Studio Removes Prototyping Friction

Multimodal Sandbox

Prompt Gemini models directly with audio, video, images, and text.

Utilize massive context windows to ingest complete documentation.

Zero local setup required to test complex enterprise use cases.

Structured Controls

Enforce strict JSON schemas directly in the web interface.

Configure system instructions and global guardrails per experiment.

Tune temperature and token thresholds for deterministic outputs.

One-Click Export

Convert validated playground prompts into production SDK calls.

Export ready-to-run code in Python, JavaScript, cURL, and REST.

Instantly link Google Cloud projects and manage API credentials.

A 5-Step Structure Ensures Prompt Reliability

[01]

Role & Persona

Define identity, domain expertise, and operational tone.
Set safety guardrails and behavioral boundaries.

[02]

Core Task

State primary objective using direct action verbs.
Clarify target goals and eliminate ambiguity.

[03]

Context & Rules

Provide background data and reference documents.
Define constraints and explicit negative constraints.

[04]

Few-Shot Demos

Supply input-output pairs to anchor model behavior.
Demonstrate edge-case handling explicitly.

[05]

Output Schema

Enforce strict JSON schemas for API parsing.
Eliminate conversational filler and markdown artifacts.

LIVE ASSESSMENT

Put Knowledge into Practice via Feynman.live

Join Code: NL78C6

Portal URL: **feynman.live**

Navigate to feynman.live or scan the companion QR code.

Enter room code NL78C6 and sign in with college email.

Instantly receive a six-digit verification code with zero install.

NL78C6

Sign in with your college email. You will get a six-digit code — no account, no app to install.

Or scan this if you are on a phone

LIVE WORKSHOP

Let's Build: Interactive Execution

Workshop Roadmap

Task 1: Configure system instructions and multimodal assets in the studio.

Task 2: Test structured JSON schema validation on sample payloads.

Task 3: Export production Python code and test endpoint execution live.

Open Google AI Studio

Transition from discussion to direct hands-on
execution right now.
